ABOUT MENDIPATHAR COLLEGE

Mendipathar College, Mendipathar was established on 30th July, 1971 affiliated to Guwahati University. The college started functioning from the academic session 1971-1972 and was formally inaugurated by Capt. Williamson A. Sangma, the first Chief Minister of Meghalaya on the 11th August, 1971. The College was inspected by Shri J.N.Das, then Principal of B.N.College, Dhubri, Assam and permission to open one year P.U.Course was granted by Guwahati University for academic session 1972-73 but the Guwahati University did not accord permission as the North Eastern Hill University was soon to take over the College under its jurisdiction. The NEHU accorded permission for Degree Courses for the academic session 1974-75. The College was established in an area of 73.19 acres of land as an Adhoc College with the primary objective of providing Higher Education to the socially backward sections of the society in general and Garo community in particular.

The College was elevated to the status of deficit Grant-in-Aid College on 1st January 1986. During the year 2000, the college was recognized by UGC, for the grant purposes under 2(f) and 12(b) of UGC Act, 1956. In 2018, Mendipathar College got Assessed and Accredited by National Assessment and Accreditation Council (NAAC) with a CGPA score of 1.90 at 'C' Grade.

ABOUT THE FDP

AI in education can help create more personalized student experiences by providing customized content, recommendations, assessments, and virtual tutoring instructions based on their individual goals, preferences, and habits. AI can be used in education in various ways. Students can use it to get answers for homework and other schoolwork or as a tool that supports their learning. This can be done through chatbots or virtual tutors who answer real-time questions. Artificial intelligence in education can analyze student data from tests, quizzes, and homework to understand what concepts students struggle with or which ones they excel at. Since AI is software and not a human, it cannot develop new ideas or perspectives on old ideas. While this may seem like a minor deal at first glance, it can be incredibly problematic when trying to teach students who are still learning to think critically about topics such as politics or history.

The future of education is AI, and it will be a game-changer for students and teachers alike. As we move forward in this new era of technology, we will see more and more integration of artificial intelligence into our classrooms. AI can help teachers analyze student data over time to reveal patterns of behavior that would otherwise be invisible to the teacher. It can provide personalized learning based on each student's needs, interests, and preferences. This could be done by analyzing student data over time to reveal patterns of behavior that would otherwise be invisible to the teacher.

With the ability to analyze data on student performance and preferences, AI can help educators to create customized lesson plans and assessments that align with each student's unique strengths and weaknesses. This can improve student engagement and motivation, and ultimately lead to better academic outcomes. Artificial Intelligence is helping the scientific community in academic publishing as well. It can assist in peer reviews, searching and extracting published content as well as in detecting plagiarism and spotting data fabrication. AI powered tools are also useful in scientific communication as they are not prone to the same bias as humans.

AI can overcome the challenges and problems often faced by science writers with limited experience with the task. We are entering a new age of scientific research where mundane research tasks will be carried out by machines letting scientists focus on bigger questions of research and development. Thus, artificial intelligence is promising to profoundly reshape scientific research and exploration. Not only will AI lead to innovations, discoveries and scientific advancements but will also speed up the research process.
